AYANLE SULEIMAN JAMA

Junior Full-Stack Developer · Kuala Lumpur, Malaysia (open to remote)

ayaanlesaleeban08@gmail.com · +60 11-6392 9956 · github.com/Ayanle-suleiman · linkedin.com/in/ayaanle-saleeban-60b908281 · Portfolio: ayanle-suleiman.github.io

Profile

Data Science undergraduate who builds web apps end to end, from the database through to the React front-end. I have built a React + Tailwind portfolio site, a Python/Flask web app with login and role-based access, and data projects published on GitHub. I'm looking to join a Next.js + Supabase team where I can ship production features, learn from code reviews, and bring my SQL and data skills to the product.

Technical Skills

- **Front-end:** React, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, responsive and mobile-first design
- **Back-end:** Python, Flask, REST APIs, authentication and role-based access
- **Databases:** SQL, PostgreSQL basics, data modelling
- **Data:** Pandas, NumPy, data cleaning, exploratory analysis, data visualisation, forecasting models (RMSE/MAE evaluation)
- **Tools:** Git and GitHub, VS Code, Jupyter Notebook
- **Currently learning:** Next.js (App Router), TypeScript, Supabase (Auth, Postgres, Row Level Security), Vercel deployment

Projects

Student Grade Manager: Python, Flask, HTML/CSS

- Built a web app with separate student and teacher logins, mark entry, automatic grading and a top-3 leaderboard
- Started as a command-line tool, then rebuilt as a browser app with a Python back-end
- Added a feedback system so students can view teacher comments on their results

Developer Portfolio Website: React, Tailwind CSS, HTML/JS · ayanle-suleiman.github.io

- Designed and built a responsive single-page portfolio with project cards, a data-themed hero section and a mobile navigation menu

- Kept all content in one config object, so projects and contact details can be updated without touching components
- Debugged an earlier HTML/JS version, fixing a broken API call and moving an exposed API key behind a back-end proxy

Dengue Outbreak Forecasting Dashboard (Final Year Project, in progress): Python, forecasting models, web dashboard

- Combining dengue case data with weather data from the Malaysia Open Data Portal to forecast weekly outbreaks by district
- Building a web dashboard that shows weekly forecasts and risk levels; models evaluated with RMSE and MAE

Flight Delay Analysis: Python, Pandas, data visualisation · github.com/Ayanle-suleiman/flights_Delay-analysis

- Analyzed 2023 flight records from Atlanta airport alongside US daily passenger data to find delay patterns
- Cleaned and merged datasets and published the analysis on GitHub

Education

Bachelor of Computer Science (Hons), majoring in Data Science: Multimedia University (MMU), Malaysia · Aug 2024 to Aug 2027 (expected)

- Relevant coursework: Data Science Fundamentals (CDS6214), Statistical Data Analysis (CDS6224)
- CGPA: 3.40

Additional Information

- **Languages:** English (C2), Arabic (B2)
- **Availability:** Open to fully remote work
- **Work style:** Comfortable with async remote collaboration through GitHub pull requests and written updates
